EFAFLEX
safe high-speed doors

First steps with
EFA-SmartConnect®

Doors with **EFA-SmartConnect®** have an integrated WiFi interface.

In order to show multiple doors in the door overview in the app, all doors and the smartphone must be on the same network. Adjust the network configuration for each individual door for this.

In the condition on delivery, each door is configured as a WiFi router. The access data can be found on the QR code supplied with the product. As soon as the network configuration for a door has been changed, it is no longer possible to connect to the door using the QR code.

1. DOWNLOAD THE EFA-SmartConnect® APP

Use the **QR code** opposite to download and install the **EF-SmartConnect® app**.

App Store

A Integrate doors into your existing network

Network client Network client Existing network Network client

1 Configure **the desired doors** as a **"network client"** for your existing network.*

2 Switch to your existing network with your smartphone.

B Create an independent WiFi network

Network client Network client Door as a WiFi router Network client

1 First, configure a **central door** as a **"WiFi router"** in order to create a new network.*

2 Configure **each other door** as a **"network client"** on the new "router" network.*

3 Switch to the new "router" network with your smartphone.

If you do not want to integrate your door into a network as in 2A and 2B but nevertheless want to change the access data, please follow the instructions.

Changing the WiFi access data for the door

1 Configure the door as a **"WiFi router"** and enter the desired access data.*

2 Switch to the network you have just created with your smartphone.

Information: door as a WiFi router

• Creates a local WiFi network **without internet access**
• The network range is limited to the **WiFi range** of the door
• Limited number of **network clients** (total of 10)
